FRAMEWORKS & POLICIES |
OP RESILIENCE | OP RISK
MGMT | PROCUREMENT |
TECH RESILIENCE |
TRAINING & AWARENESS

The ask?

An industry superannuation fund needed support with establishing their CPS 230 regulatory change program and subsequent implementation activities to ensure compliance with APRA's new prudential standard.

PX Partners has been engaged as the **firm's strategic CPS 230 partner** to conduct an upfront **readiness assessment** and **ongoing support for key implementation activities** such as identification and mapping of critical operations and tolerance setting, design of service provider approach, etc.

The so what?

The PX Partners' team leveraged our experience to **seamlessly integrate into the client's in-house project team** and drove key outcomes across the CPS 230 program of work. Activities and deliverables include, but were not limited to:

- Readiness assessment to understand current state and areas of uplift
- Framework & policy uplift, as required
- Reporting & tooling to support oversight & monitoring.
- Data models and system functional re-design to support end-to-end op resilience management
- Board & senior management training & education sessions to drive the case for change.

The px Difference

Our lived experience across successful regulatory change programs and large-scale transformation meant we provided **value-add insights** and drove **fit-for-purpose solutions from Day 1** of the client's regulatory change journey. This was key in establishing a pragmatic and achievable program plan which **leveraged existing collateral and internal resources** where possible to **reduce costs and embed knowledge** across the organisation.

Below are some examples of our outputs to date:
